Widespread variation in molecular interactions and regulatory properties among transcription factor isoforms

- Out of 246 TFs, hundreds of isoforms and 2/3 of them differ from their references in at least one key molecular activity, including DNA-binding or transcriptional effects
- ~50% of alternative TF isoforms show differential subcellular localization or condensate formation

- Contextual fear conditioning, a behavioral learning paradigm that induces differential gene expression in the hippocampus
- 1,266 significantly experience-variable isoforms identified
- Roughly 20% of the experience-variable isoforms arose from alternatively-spliced genes that showed no differential expression at the gene level

> Cell Rep. 2025 Sep 2;44(9):116216. doi: 10.1016/j.celrep.2025.116216. Online ahead of print.

Transcript isoform diversity defines molecular subtypes and prognosis in acute myeloid leukemia through long-read sequencing

Xiaoguang Shi ¹, Shuai Wang ², Shuting Yu ², Fangying Jiang ², Jinzeng Wang ², Yao Dai ², Jincan Li ², Ruihong Zhang ², Tong Yin ², Yuting Dai ², Hai Fang ², Junmin Li ², Hongming Zhu ³, Shengyue Wang ⁴

- Identified 119,278 previously unannotated transcript isoforms. Of these, 80,294 (67.31%) contain complete open reading frames, with 9,812 (12.22%) validated using MS

- Still, plenty of benchmarks and lack of consensus...

AnaConesa @anaconesa · 7 jun. 2024

...

We generated over 450 million long reads on 3 species with several library preparation and sequencing platforms, and drafted 3 challenges: transcript annotation with a reference annotation, transcript quantification, and transcript identification without a reference (2/6).

AnaConesa @anaconesa · 7 jun. 2024

...

14 tools submitted predictions that were analyzed by an independent team of evaluators applying different benchmarking strategies, including #SQANTI from @conesa_lab, @the_au_lab, @GenCodeGenes curation, and @GSheynkman for experimental validation (3/6).

Lior Pachter
 @lpachter

We benchmarked some other tools that have recently been developed for long-read quantification, including Bambu, Oarfis, and IsoQuant. Ir-kallisto is faster and more accurate. 6/

- Still, plenty of benchmarks and lack of consensus...

THE PREPRINT SERVER FOR BIOLOGY

A Systematic Benchmark of High-Accuracy PacBio Long-Read RNA Sequencing for Transcript-Level Quantification
